It is the responsibility of the person installing the electrical equipment to ensure that the installation meets the requirements of the IET wiring regulations and is therefore 'fit for purpose'. Factors such as correct selection of components, cable sizing, protective devices and Earth bonding are all critical and should be checked prior to full testing and power-up. Any other regulations applicable to the equipment being installed such as the Machinery Directive and current health and safety legislation must also be adhered to.

All connections (including factory made) must be checked for the correct tightness prior to commissioning of the electrical installation.
All connections should also be inspected periodically to ensure correct tightness.

Procedure to dismantle the Cover:

- ♦ Ensure the switch is in OFF position.
- ♦ Unscrew the cover screws and remove the cover.
- ♦ After wiring ensure the profile orientation of the actuating spindle and knob shaft are in same position.
- ♦ For easy wiring, switch can be removed from the base and to fit after wiring.
- ♦ Place the cover with the base and tighten the cover screws moderately.
- ♦ Tightening Torque for cover screw is 1.2Nm.

Please Note : There is no need to remove the switch handle in order to remove the cover.
